

# SYSTEM AND METHOD FOR PROVIDING PAPER MODELS OVER A WIDE AREA COMPUTER NETWORK

### ABSTRACT OF THE DISCLOSURE

A system for providing paper models over a wide area computer network includes a user computer that communicates with a model server via the Internet. The model server includes a database of paper model files, e.g., the pieces of the models and assembly instructions. The corresponding method allows a user to access the model server via the Internet and download paper models. The paper models are printed at a printer connected to the user computer. A user can then assemble the paper models following the assembly instructions.
